update installation Looking for norton ghost32.exe v12 update installation? Norton Ghost can be used to rescue or restore an existing system or to prepare an empty hard disk or volume to be ready for use with the Microsoft Windows operating system. It can also be used to write data to a compatible digital camera without modifying the image of the original disk. Norton ghost 32 is a Microsoft Windows XP and Vista stand-alone application that serves as the main interface to the Ghost package. NAG Ghost is the successor to the product Ghost v4, released on the 5th of June 2007. The last release was version 12.3 which was released on the 5th of August 2008. Norton Ghost 32 is the main application in the package and is the successor of NAG Ghost 32 that was created in 2002. This application gives users the ability to easily create bootable system diskettes, create bootable CD/DVD discs, and create multiple system images with a single click. Once created, the images can be transferred to other computers and NAG Ghost can make the necessary updates or repairs to the image. Norton Ghost v4 is the successor to NAG Ghost 2.0. It was released on the 3rd of February 2003 and updated on the 15th of June 2004. Ghost v4 is an early version of Norton Ghost. It has a simple interface. It was designed to work with Windows NT and Windows XP and the trial version included in the application. Norton Ghost v4 has been updated and developed by the creators of Norton Antivirus 2003. It has been designed to be compatible with the most current Microsoft Windows version. This means it is an upgrade from NAG Ghost that works with older Windows versions. NAG Ghost 2.0 is included in the application. This version has a simple interface and is designed to work with Windows NT and Windows XP. There is no other version that is included in the package other than NAG Ghost 2.0, Ghost 2.0, and Norton Ghost 32. Norton Ghost 32 is included in the package because it is the primary application of the package. The package is a stand-alone application that can run on its own, without the Norton antivirus suite. It is compatible with Windows NT and Windows XP and the trial version of Ghost v4 is included. The application was updated on the 22nd of June 2007 to include the Vista compatibility checker.
